PROFESSIONAL SUMMARY

AI Engineer with 1.5 years of experience designing and shipping production LLM systems and data-intensive backends. At Pothys Retail, builds and runs the company's finance operations platform, spanning reconciliation, GST compliance, enterprise email and AI agents. Previously at CobuildX.ai, delivered four AI-powered SaaS products, including a Claude-integrated MCP server, a legal RAG platform and an open-source package on PyPI. Works across Python, TypeScript/React, AWS and GCP.

WORK EXPERIENCE

Pothys Retail Pvt Ltd Jul 2026 – Present

AI Engineer

- Built and own the company's finance automation platform (FastAPI, React, PostgreSQL, GCP), delivering **~20 reconciliation and GST modules used daily** by the finance team, with role-based access control, security hardening, **500+ automated tests** and production deployment.
- Designed a multi-level **GST input tax credit reconciliation engine** that matches SAP purchase records against GSTR-2B **in minutes**, integrated with the live SAP vendor master to **automate vendor compliance notices**.
- Built an **LLM finance assistant** that answers from live reconciliation data through function calling and **runs actions only after the user confirms them**, plus **scheduled AI agents**, including a **maker/checker agent** in which a second model verifies findings against source data.
- Developed **accountant performance analytics** that track weekly clearance of open vendor items, **matching the finance team's manual results exactly**, with automated rankings and **AI-written management summaries**.
- Integrated enterprise email automation with **Microsoft 365 via the Microsoft Graph API**, using certificate-based authentication and **rate-limited batch delivery** for statements and notices.
- Engineered a **configuration-driven bank statement processing engine** with built-in total validation and **AI-assisted onboarding of new formats**, replacing multiple bank-specific parsers.

CobuildX.ai Apr 2025 – Jun 2026

AI Engineer

- Built a **Model Context Protocol server on AWS Lambda** exposing **8 tools to Claude** for B2B lead management, ICP scoring (0 to 100) and contact enrichment via Apify with a Hunter.io fallback, with scheduled Slack reminders that **removed manual outreach steps**.
- Delivered **truAI**, a DPDPA-compliant legal RAG platform with citation-grounded answers and sub-second first-token streaming, plus an automated GitHub scanner for **300+ PII and cookie-compliance patterns**, **reducing manual legal review effort by ~40%**.
- Published **truScanner** (v0.2.10) on PyPI, an open-source CLI that detects **300+ personal and financial data patterns** with a three-tier LLM fallback that **runs fully offline**.
- Designed a two-level LLM memory architecture for **WarpX**, an AI collaborative workspace, **cutting per-message token cost by ~60%**.

SKILLS

Languages	Python, TypeScript, JavaScript, SQL
AI & LLMs	LLM Agents & Function Calling, RAG, LangChain, Anthropic Claude API, AWS Bedrock, Google Vertex AI, Vector Embeddings, Ollama, PyTorch, TensorFlow
Backend & APIs	FastAPI, REST APIs, MCP (JSON-RPC 2.0), Microsoft Graph API, SAP OData, OAuth 2.0, JWT, Pydantic, SQLAlchemy, Alembic
Frontend & Data	React 18/19, TypeScript, Vite, Tailwind CSS, React Query, PostgreSQL, DynamoDB, Supabase, ChromaDB
Cloud & DevOps	GCP Compute Engine, AWS Lambda, API Gateway, EventBridge, nginx, Docker, Linux, GitHub Actions
Testing & Tools	Pytest, Locust (load testing), Git, ReportLab, PyPI publishing

EDUCATION

Mepco Schlenk Engineering College, B.Tech in Artificial Intelligence and Data Science Oct 2021 – Apr 2025

PUBLICATIONS & OPEN SOURCE

- "YOLO-ASCA: A Rule-Based Framework for Identifying Safety Risks in Construction Management", WiSPNET 2025, SSN College of Engineering, Chennai (IEEE Xplore).
- **truScanner** v0.2.10 on PyPI, an open-source CLI for PII and financial data detection: pypi.org/project/truscanner
- Kaggle: 4 datasets, 500+ downloads, covering an AI-agent failure benchmark (2,202 runs), fuzzy invoice reconciliation (**94.4% of true pairs recovered**), vendor payment subset-sum matching (**99.2% precision**) and student placement prediction.
